For 37 years, Reed's Lock & Access has provided unsurpassed, full-scope locksmith, safe, and security services to the Lebanon Valley and surrounding areas. One of the most unique offerings for the Annville business is that Reed's is a real bricks-and-mortar store with real customer service!

Sadly, plenty of dubious "companies" populate the internet. Says owner Mark Reed, CML (ALOA

Certified Master Locksmith): "There are lots of so-called security companies. But try to get service AFTER the sale! No 800 number from who-knows-where offers the trained, caring technicians that Reed's provides. Our clients find it crucial to deal directly with someone who is local, visible, and available."

Trust and integrity are paramount when security is at stake. Your home or business security issues deserve prompt, professional, knowledgeable service. These are the cornerstones of Reed's Lock & Access. We have successfully combined cutting-edge security technology with the personal touch clients want and deserve.

From duplicating a simple key—from our selection of 100,000 plus in stock—to complex access control system design and security consulting and troubleshooting, the Reed's team can customize locks, alarm systems, access control and more to address specific needs.

Single-key convenience is a real time-saver for busy families. Many homeowners appreciate same-key convenience for their deadbolts, knob locks and even padlocks. Or... how about keyless options? Push-button programmable entry options eliminate keys altogether. Stylish and functional knob locks and deadbolts add a decorator touch to one's home or business. High-security cylinders kick that up a notch!

Smile! You're on CCTV, an integral part of many security programs, commercial and residential. High-resolution IP cameras are today's standard, with real-time viewing from your mobile device. With a click or swipe, instantly locate incidents, and produce the digital evidence. You can even view and record simultaneously, for seamless and continuous security.

Never open your door until you know who's there! See who knocked with a visual intercom system, or visual doorbell. Great for in-home or at-work safety. ID visitors and open the door from elsewhere.

What about your ride? Transponder keys (aka "chip" or "laser cut") are now the automotive standard. "Just provide us with the year, make and model of your vehicle. We can cut and program most transponder keys and remotes," says office manager and co-owner Jill Reed. "Got a motorcycle, big rig, or classic car? We've got those keys, too. Lost keys? We replace them!" Wide selection in stock.

From rekeying services ("changing locks"), to keypad entry, multi-door card or fob access control system with audit trail, to a 24/7 monitored alarm system—it's all in a day's work for the Annville company. Staff includes 27-year locksmith veteran Rick Kuhnert, CPL, Francis DiFava, electronics techs Mike Mann and Ryan Arnold, and Denise Fair.

Reed's Lock & Access Control also carries a wide array of conventional security products, including ADA lever locks, deadbolts, door closers, exit devices and padlocks—anything you need to secure your home, business or vehicle. A large showroom featuring fire- and burglar-rated safes round out the full range of products. Their motto, Single Source Security Solution, is very fitting. Coming soon: totally revamped, user-friendly website, and a new "Van 3!"

Tomorrow's security combined with outstanding customer service puts Reed's Lock & Access Control in a class by itself. Check out the showroom at 700 East Main Street on 422 in Annville. Showroom hours 8:30 through 5:00 Monday thru Friday; Saturdays 9:30 till 12 noon. Free local estimates. And visit online www.reedslock.com
